Group Project Presentation

As a graded part of your group project, your group must present in class (on either May 3 or May 5) the work you did. Not all group members are required to be involved in the presentation (in fact, one group member taking on the responsibility of giving the presentation is a great way to ensure that he/she is contributing an equal amount of effort to the project).

Each group will be given four minutes (that's 4 minutes, not more) to give their presention which should include:

- a brief verbal (or textual, slide-based) description of the project: what the software developed does,

- a brief identification of the number one challenge faced by the group (which may be use of a new technology, or finding a way to work together and divide up responsibilies, or if you think your group had no challenges whatsoever then your challenge was to keep to the plan and not do more simply because it was all so easy), and

- a brief demonstration of the software (in the form of a live demo, or in the form of a series of presented screenshots demonstrating the software in use)

Above all, remember that your group will have no more than four minutes to present the above information. Choose carefully your wording, and how much time you allow yourself to spend on each of the above items. At four minutes your group presentation will end, as announced by the instructor, and you will be expected to "exit the stage" to allow the next group to be able to "setup" and prepare to begin their presentation. One minute will be allowed for each group to "setup" and prepare (e.g. plug their laptop into the projection system, etc.)

Note that it is not required (and is also sufficient) to give the presentation entirely from printed slides projected using the document camera. Use of your laptop (or other electronic device) and the projection system is "at your own risk". You should arrange to test the setup outside of class time to ensure it will work.

You do not need to upload any material related to your presentation to any D2L Dropbox.
